Author Index

rheolwr22, Friday 23 March 2012 - 14:29:00

The original bibliography had an Index of authors which referred to an item number which was then used to look up the entry in the bibliography. You do not need to do that in this index but the number has been retained in the database and is shown as its Bib_Ref.

To search for an Author enter a name in the box below and then click on the 'Search' button (or press 'Enter').
You can view a list of entries by the first letter of the Author's surname by clicking on the letter of your choice in the A-Z list.

Note concerning Diacritics. In order to correctly display diacritics on characters returned from the database they have had to be coded in the database using their Unicode character codes. This means that if you want to search for a word which contains a diacritic then you must include the Unicode in your search string.
Diacritic characters that may occur in the index and their unicodes are shown below. (don't forget the semi colon at the end!)

e.g.
